Appendix: every finding 12
36 confirmed issues and 68 judgement calls, screen by screen

About this report

Aucert prepared this illustrative preview for Wikipedia (Android App) from an automated scan of one build of its Android app, run on 22 October 2026. It covers the 37 screens the scan reached in 21 minutes. Three of Aucert's expert agents checked them, Genie for design, Iris for accessibility, and Pax for Google Play policy, and every finding was then reviewed against the screenshot and the screen's accessibility data.

■ Confirmed issue ◆ Judgement call ○ Clean PLACEHOLDER Placeholder competitor value

EXECUTIVE SUMMARY

36 confirmed issues. Three patterns cause 58%.

Iris, Genie and Pax checked the 37 screens the scan reached in Wikipedia's Android app. Most of what they found is a short search bar, tabs that don't say they're selected and small icons.

37
screens checked in 21 minutes

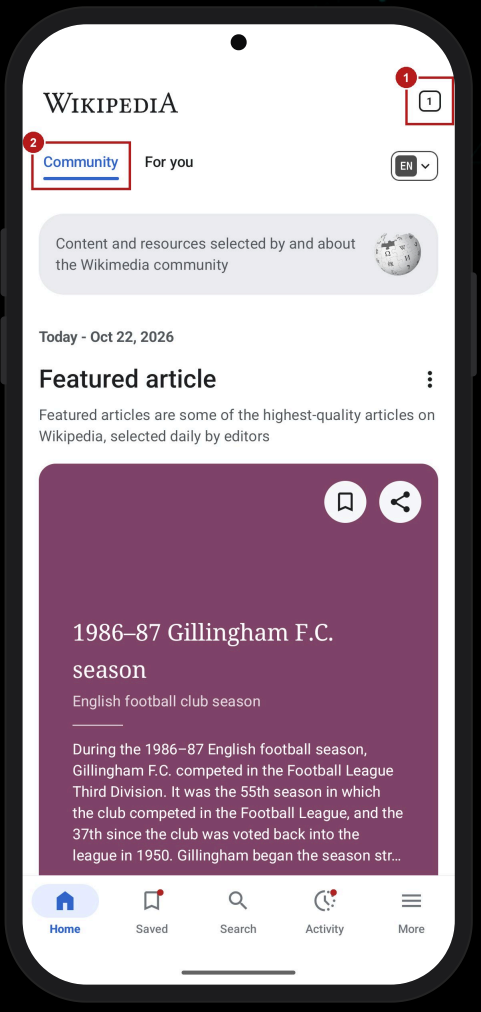

28
screens with at least one confirmed issue

36 dp
height of the article search bar; Android asks for 48 dp

6
selected feed tabs that don't tell a screen reader so

14
break a WCAG 2.2 Level A or AA criterion

54
links inside article text, listed but not counted

The three patterns

9 issues
Search bar and field 36 dp tall

Give the search bar and field a 48 dp touch height.

6 issues
Selected tabs that don't say so

Give the feed tabs a tab role and selected state.

6 issues
Icon buttons under 48 dp

Widen More options and the scroll button to 48 dp.

Illustrative preview of one build of Wikipedia (Android App) for Android, scanned 22 Oct 2026. Not a full audit.

SECTION 1

Where the issues are

Confirmed issues on

28

of the 37 screens the scan reached

Of 36 confirmed issues,

21

come from three patterns

The scan reached 37 screens of Wikipedia's Android app, an alpha build, before it was stopped at 21 minutes. Iris, Genie and Pax checked each one.

They reported 104 findings: 85 from Iris and 19 from Genie. 36 were confirmed and 68 were judgement calls. Nine screens had no confirmed issues; seven had no findings.

Reading articles holds 9 confirmed issues and search 8. The same search bar, scroll button and feed tabs repeat across screens, so each is one fix.

Exhibit 1

The same few components repeat across every journey

Confirmed issues on each screen, by journey, in scan order

Exhibit 2

Every finding was reviewed before it reached this report

Findings by review verdict, number of findings (104 reported: 19 by Genie, 85 by Iris)

36 confirmed issues **68** judgement calls

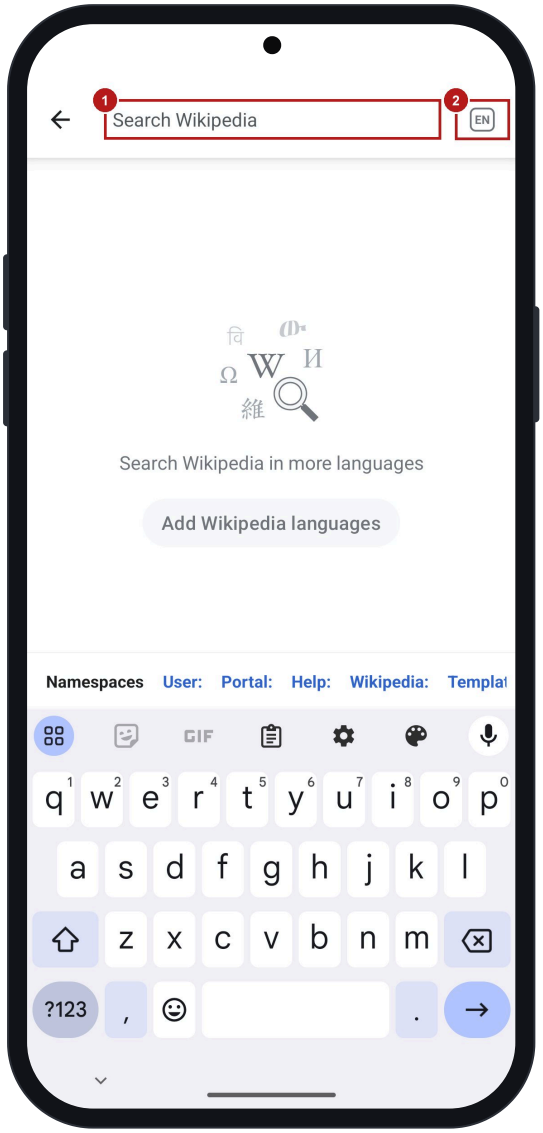

Source: Aucert scan of Wikipedia (Android App) for Android, 22 Oct 2026 (scan_7g7×8jhdauxub86); Aucert analysis

Search

Exhibit 3

3 confirmed issues: a short search field and the “EN” button

SCREEN-19, where people search Wikipedia, numbered as the scan marked it

Iris · Accessibility ■ Confirmed issue ◆ Judgement call

1 Search field

- ■ 285 × 35 dp; Android asks for 48 dp

2 Language button “EN”

- ■ 48 × 36 dp; Android asks for 48 dp
- ■ Named “Wikipedia languages”, so saying “EN” to voice control misses it

Pax · Google Play policy

– Store policy (whole screen)

- ✓ **162 Google Play policies** checked on every screen; none broken

Box 1 **What fixing this screen takes**

1	1	1
confirmed issue cleared	confirmed issue cleared	confirmed issue cleared
Give the search field a 48 dp touch height.	Give the language button a 48 dp touch area.	Put “EN” in the language button’s name.

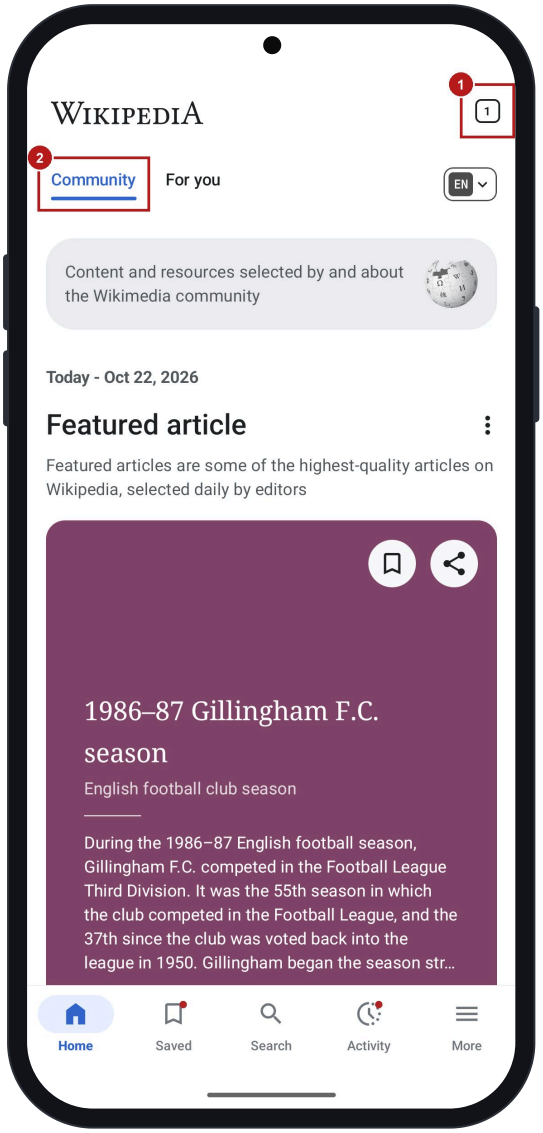

Source: Aucert scan of Wikipedia (Android App) for Android, 22 Oct 2026 (scan_7g7×8jhdauxub86), screenshot as captured; Google Play developer policy; Aucert analysis

The Explore feed

Exhibit 4

2 confirmed issues: an unnamed Tabs button and a silent tab

SCREEN-17, the Explore feed, numbered as the scan marked it

Iris · Accessibility ■ Confirmed issue ◆ Judgement call

1 Tabs button, showing “1”

- ■ No name, so a screen reader can’t say what it does

2 Community tab

- ■ Selected, but exposes no tab role or selected state

Box 2 **What fixing this screen takes**

1
confirmed issue cleared
Name the Tabs button, e.g. “Tabs, 1 open”.

1
confirmed issue cleared
Give the feed tabs a tab role and selected state.

Source: Aucert scan of Wikipedia (Android App) for Android, 22 Oct 2026 (scan_7g7×8jhdauxub86), screenshot as captured; Aucert analysis

SECTION 3

Why it happens, and what to fix

The same few problems repeat across screens. Fixing a pattern once, in the shared component or the colour token, fixes every screen that uses it.

Exhibit 5

Three patterns cause 21 of the 36 confirmed issues

Confirmed issues by pattern, with the cumulative share

Pattern	Confirmed issues	Cumulative
Search bar and field 36 dp tall	**9**	25%
Selected tabs that don't say so	**6**	42%
Icon buttons under 48 dp	**6**	**58%**
Names that don't match the screen	5	72%
Icon buttons without a name	4	83%
Intro pages without progress or Skip	3	92%
Grammar and capitalization slips	2	97%
Two prompts at once	1	100%

Exhibit 6

Every failing target is 35–44 dp

Each confirmed issue, against the minimum it misses; green lines are the minimums

Tap targets smaller side, dp

3 of the 15 are 42–46 dp, within 6 dp of 48.

Box 3 **A fix plan in three steps**

1 NOW	2 NEXT RELEASE	3 EVERY BUILD
Give the search bar and field a 48 dp touch height.	Name the Tabs button and the contents scroll button.	Check new screens: new components bring patterns back.
Give the feed tabs a tab role and selected state.	Put "EN" in the language button's name.	Re-run the same checks to confirm each fix held.
Widen More options and the scroll button to 48 dp.	Show progress dots and Skip on every intro page.	

Source: Aucert scan of Wikipedia (Android App) for Android, 22 Oct 2026 (scan_7g7×8jhdauxub86); Aucert analysis

SECTION 4

How you compare

PLACEHOLDER DATA Every competitor value on this page is a placeholder that shows the layout, not a measurement of any real app. Wikipedia (Android App)'s own numbers are real. A scan of a chosen competitor's published app, run the same way, will replace them.

0.78×

Wikipedia (Android App)'s confirmed issues per screen, against the competitor's **(placeholder)**

0.41

issues per screen after the three fixes (real), below the competitor's 1.25 **(placeholder)**

Exhibit 7

Today and after the three fixes, beside a placeholder competitor

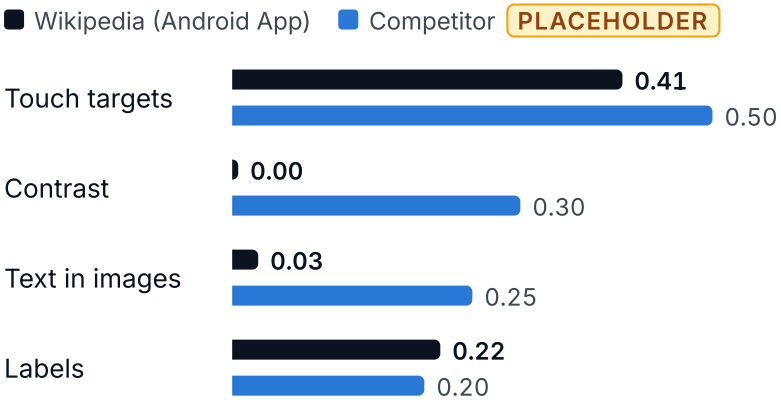

Confirmed issues per screen, lower is better

Exhibit 8

Issues per screen by type, beside a placeholder competitor

Confirmed issues per screen, by type

Box 4 **How we compare**

The competitor is scanned the same way: the same agents and checks, on the same journeys, within the same week.

Until that scan is in, the competitor's values here are placeholders, and no rank is shown.

The competitor is never named, and no other app is shown.

Exhibit 9

The same journey, side by side: the whole scan

App	Screens	Confirmed issues	Per screen	Smallest target	Lowest contrast
Wikipedia (Android App)	37	36	**1.0**	35 dp	none failed
Competitor PLACEHOLDER	5	4	**0.8**	44 dp	4.1:1

Source: Aucert scan of Wikipedia (Android App) for Android, 22 Oct 2026 (scan_7g7×8jhdauxub86). The competitor's values on this page are placeholders, not measurements of any app.

SECTION 5

The standards

Of the 36 confirmed issues,

14

break a WCAG 2.2 Level A or AA criterion

Exhibit 10

14 issues break WCAG 2.2; 16 are Android guidance and 6 design guidelines

Confirmed issues by standard, number

WCAG Level A **14**

Android guidance only **16**

Aucert design guidelines **6**

Exhibit 11

Where the screens fall short, standard by standard

Standard · criterion	What it asks	Result	Confirmed issues	Screens	Judgement calls
1.1.1 Non-text content WCAG 2.2 · Level A	Images that carry meaning have text; decor is hidden	Fails	2	2	0
2.5.3 Label in name WCAG 2.2 · Level A	The name includes the visible label	Fails	2	2	0
4.1.2 Name, role, value WCAG 2.2 · Level A	Controls expose a name, role and state	Fails	10	9	1
Touch target size Android accessibility guidance	At least 48 × 48 dp	Fails	15	13	54
Role repeated in label Android Accessibility Test Framework	Don't restate the element type in its label	Fails	1	1	0
Navigation and wayfinding Aucert design guidelines	Every tab has an icon and a label in one style	Fails	3	3	3
Copy Aucert design guidelines	One capitalization style; no spelling or spacing errors	Fails	2	2	0
Dialogs and interruptions Aucert design guidelines	One prompt at a time	Fails	1	1	0

○ **Not checked by this preview:** the iOS app.

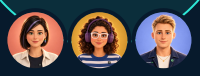

Sources: W3C, WCAG 2.2; Android accessibility guidance (developer.android.com); Aucert design guidelines; Aucert analysis

SECTION 6

How this preview was made

37 screens

17 policies

104 findings reviewed

Aucert explores

Walks the app like a user and captures each screen and its accessibility tree.

Genie, Iris, and Pax check

Iris checked 101 policies, Genie 83, Pax 162.

Every finding reviewed

Each one checked against the screenshot and element data. 36 confirmed issues.

Time and credits

21 min
scan time, about 0.57 minutes a screen

111
credits: 37 screens × 3 agents × 1

A credit covers one screen checked by one agent. Exploring the app isn't counted.

What the verdicts mean

- **Confirmed · 36.** The screen breaks the policy as written.
- **Judgement call · 68.** The evidence is real, but reasonable reviewers could disagree whether it breaks the policy.
- **Not an issue · 0.** The screen complies, or an exemption in the policy applies.

What this preview doesn't cover

- Stopped at 21 minutes, after 37 screens.
- Inline article links aren't counted.
- 2 screens have no screenshot.
- One alpha Android build; no iOS.

Policies checked

Genie Iris Pax
